Bilateral Meetings

- 14:00p.m. - 17:00p.m

Description

Main performance of the company is research and development in the fields of geology, like hydrocarbon and raw material exploration, geothermal energy research, carbon-dioxide sequestration, radioactive and hazardous waste disposal, water research and environmental protection. Its main objective is to integrate the results of basic research to industrial practice. The company focuses primarily on special instruments and continuous equipment improvements with the complex investigation of very tight and unconsolidated materials. Services are cost effective, internationally competitive and acknowledged Europe wide for their high standards.

Research and Development, Project Partnership

Offer & Request

Geological research, petrophysical measurements and technology cooperation

Business offer:

Non-routine, special petrophysical measurements and complex investigation of very tight and unconsolidated materials like shales, unconsolidated sandstones.

Geological research and consultancy in LLW/ILW/HLW projects, laboratory design, methodological and equipment development for special geological challenges (PPD permeability, acoustic measurements).

Technology cooperation:

SMLAB project concept implementation: time-saving, cost effective solution by combining on-the-spot measurements made by local technicians on-site in a portable container lab and detailed analysis via internet connection from Hungary.

Keywords: geology tight and unconsolidated materials radioactive waste petrophysical measurements permeability acoustic wave velocity

Cooperation Offered

1. Technical co-operation
2. Sales / Distribution
3. Other

Cooperation Requested

1. Technical co-operation
2. Investment/Financing
