Offer

SHORT RANGE WIRELESS COMMUNICATION TECHNOLOGY

A Croatian Faculty developed a system for short range wireless communication that can be used for energy-efficient continuous analog signal acquisition in Internet of Things applications or in wearable medical monitoring devices. The major advantage of the system is simplicity, low power operation and multiuser functionality without application of microprocessor inside transmitting unit. The Faculty seeks industrial partners interested in further development, licensing or acquisition of the developed technology.

COOPERATION OFFERED

1. License agreement

COOPERATION REQUESTED

1. Technical co-operation
2. Manufacturing agreement

3. Investment/Financing
